The Acriglas® Glitter Acrylic Series

The Acriglas® Glitter acrylic series offers designers interesting new visual effects in plastic. The dazzle of the products can be customized to add glitz or glamour to any project. A touch of superfine glitter, added to a custom colored sheet, creates the illusion of points of light reaching out from the plastic to capture the viewer's attention. Be creative, have fun, and add visual interest to any product produced from Acriglas® Glitter.

Applications

Acriglas, Glitter acrylic sheets are ideal for:

- P.O.P. Displays • Lettering • Store Fixtures • Lighting
- Signs • Toys • Novelties

Availability

Acriglas® Glitter acrylic sheets are currently offered in 13 standard colors and in thicknesses ranging from 1/8" – 3/4". Sheet sizes are limited to a nominal 4' x 6' Matte finish or textured finishes. Gloss finish sheets are available in 4' x 4', 4' x 5', and 4' x 6'.

Custom Colors

Acriglas® Glitter acrylic sheets are also available in any custom color. Because all Acriglas® products are made to order, lead times and minimum orders are the same whether standard or custom.

Physical Properties

Acriglas® Glitter acrylic sheets have the same physical properties as standard cell cast acrylic sheets. However, additional options for specific applications that require resistance to UV light, harsh chemicals, fragrances, etc. are available. Also, the composition of the sheets can be altered to ease thermoforming, allowing deeper draws than typical cell cast acrylic.

Fabrication

Acriglas® Glitter acrylic can be cut, drilled, routed, laser cut, glued, formed, hot stamped, and silk screened like any other standard acrylic sheet. It is also ideal in applications that require other acrylic products to be used in combination with the Glitter without the need for mechanical fasteners or complex adhesives.

Color Guarantees

While every effort is made to guarantee a perfect color match every time, variations in colored glitter, dyes, or monomer may cause minor color variations in the finished sheet products of each subsequent production run. This is a normal characteristic of the Acriglas® Glitter acrylic and is not considered to be a defect. Therefore, care should be taken to avoid mixing products from separate production runs where accurate color matching is required.

Important Note

Cell Cast Acrylic® by nature of the manufacturing process, will be subject to variations in thickness slightly beyond what is commonly experienced with extruded or continuous cast acrylic sheet. This is to be expected and is the nature of the material. Samples are representative of production but are not guaranteed to be an exact color match to actual production runs.

Due to printing processes, the colors on this brochure are representative, but are not exact matches of the actual acrylic products. Samples of actual product should be requested for approval prior to placing an order.
