Acriglas® Pearlescent Acrylic Sheets

The Acriglas® Pearlescent Acrylic Series

The Acriglas® Pearlescent acrylic series adds a touch of elegance for designers seeking sophistication and upscale appeal for their applications. The richness and dimension of these materials is achieved through a unique blend of pearlescent pigments and casting process. The luxurious feel can be further enhanced through the addition of a smooth matte finish or a physical texture selected from our Impressions Series.

Applications

Acriglas® Pearlescent acrylic sheets are ideal for:
P.O.P. Displays • Store Fixtures • Lighting • Signs • Toys • Novelties • Furniture

Availability

Acriglas® Pearlescent acrylic sheets are currently offered in 12 standard colors and in thicknesses ranging from $\frac{1}{8}$ " – $\frac{3}{4}$ ". Sheet sizes are limited to a nominal 4' x 6' Matte finish or textured finishes. Gloss finish sheets are available in 4' x 4', 4' x 5', and 4' x 6'.

Custom Colors

Acriglas® Pearlescent acrylic sheets are also available in any custom color. Because all Acriglas® products are made to order, lead times and minimum orders are the same whether standard or custom. Be creative and expand your choices by designing your own Pearlescent product.

Physical Properties

Acriglas® Pearlescent acrylic sheets have the same physical properties as standard cell cast acrylic sheets. However, additional options for specific applications that require resistance to UV light, harsh chemicals, fragrances, etc. are available. Also, the composition of the sheets can be altered to ease thermoforming, allowing deeper draws than typical cell cast acrylic.

Fabrication

Acriglas® Pearlescent acrylic can be cut, drilled, routed, laser cut, glued, formed, hot stamped, and silk screened like any other standard acrylic sheet. It is also ideal in applications that require other acrylic products to be used in combination with the Pearlescent without the need for mechanical fasteners or complex adhesives.

Color Guarantees

While every effort is made to guarantee a perfect color match every time, variations in pigment, dyes, or monomer may cause minor color variations in the finished sheet products of each subsequent production run. This is a normal characteristic of Acriglas® and is not considered to be a defect. Care should be taken to avoid mixing products from separate production runs where accurate color matching is required. Because the pattern of the pearlescent sheets is totally random, no two pieces will look exactly alike.

Important Note

Cell Cast Acrylic is subject to variations in thickness slightly beyond what is commonly experienced with extruded or continuous cast acrylic sheet. This is to be expected and is the nature of the material. Samples are representative of production but are not guaranteed to be an exact color match to actual production runs.

Due to printing processes, the colors on this brochure are representative, but are not exact matches of the actual acrylic products. Samples of actual product should be requested for approval prior to placing an order.
