

**KÖMMERLING®**

**KömAlu®**

**Composite  
aluminum sheets**

## Versatile, light-weight, infinitely variable - the KömAlu composite sheet system

KömAlu is an innovative and versatile composite material that can be put to use in numerous ways - from shop fittings to exhibition stands and trade fair design, from simple signage to special displays, from laminates to furnishing elements. KömAlu comprises two aluminum sheets sandwiching a polyethylene core - all bonded together with toughened adhesive in a continuous production process.

The aluminum outer sheets are enamel-baked and coated with polyester (coil coating procedure). The result is a composite sheet - light-weight but at the same time highly durable and rigid - with outstanding characteristics ideally suitable both for interior and for exterior uses.

### Delivery programme

**Size:** 2440 x 1220 (48 x 96)  
**Colours:** white / white  
white / silver

**Sheets per pallet:** 80 sheets

Protection foil on both sides
